Important Note

This SRS (Software Requirements Specification) document will be considered to be the final Project specification and supersedes all prior written and oral communications relating to the scope or specification. Please go through this as this document will be given to Developer would end up being your final product. We will allow nominal changes like text change once we provide final product other than that we don't expect any other feature being added in this phase of product.

CONTENTS

1. OVERVIEW 5

- Service Provider will view list of 10 recent redeemed vouchers along with date & time
- Service Provider can manually verify the voucher
- Service Provider can enable/disable the notification

2) Targeted Audience

- Service Provider

3) Definitions and Acronyms

Sr. No.	Acronyms	Description
1	SRS Document	A software requirements specification (SRS) is a description of a software system to be developed. Software requirements specification establishes the basis for an agreement between customers and contractors or suppliers on how the software product should function.
2	Apps	An application is a software program that is developed for use on a particular platform or device. For this document it means Android & iOS app.
3	Native Apps	Native apps are app created in native language. In this case, they are developed specifically for one platform, and can take full advantage of all the device features.
4	Mockup Designs	They are the final designs of how your app is going to look like. Please note that developer will strictly follow this during development of app.
5	Web Panel	This is the panel, which is generally provided to the admin to manage the system.
6	API	API stands for Application Programming Interface. When you use an application on your mobile phone, the application connects to the Internet and sends data to a server. The server then retrieves that data, interprets it, performs the necessary actions and sends it back to your phone. The application then interprets that data and presents you with the information you wanted in a readable way.
7	3rd Party	3rd party software component is a reusable software component developed to be either freely distributed or sold by an entity other than the original vendor of the development platform.
8	Respective Screen	This is the screen, which is either not in design or is associated with some external process or there are multiple navigations from/to different screens.

4) Technical Stack

- **Android:** 6.0 to 11.0, using flutter
- **iOS:** 14.0 to 160, using flutter
- **API:** NodeJS v10.16 With Express Framework
- **Database:** MySQL/MongoDB
- **Web portal:** CodeIgniter/Laravel with PHP v7.4
- **API format:** Json format
- **Orientation:** Portrait support
- **Web backend supported browsers:**
    - Mozilla Firefox: Min 60.0 to Max 91.0 version
    - Google Chrome: Min 65.0 to Max 102 version
